Subject: New website for breath testing instrument calibration documentation

ISPFS developed a website and uploaded all of the breath testing instrument calibration records we have in the lab. These include certification and calibration records from ISPFS. We hope this will eliminate the need for discovery or public record requests because the information is on our public website. This will save everyone time. Searching the system is easy. Go to <http://www.isp.idaho.gov/forensic/instrument-certificates/search.html> and enter the instrument serial number. All documents associated with that instrument will come up. There will also a link from our ISPFS Alcohol webpage.

Two disclaimers:

We do not believe we have all the records. Some records are sent to the agency (such as the certification documentation). If the website is missing documentation for your instrument, please email me a PDF or send me a hard copy and I will upload it for you. If the information for your instrument is incorrect, please let me know that as well.

Do not destroy any records that you currently keep. We are still keeping hard copies of the records we maintain--just in case.

We hope this is a useful resource!
