

Variation in Medicolegal Death Investigation Systems: A Review of Literature

Mackenzie Allred, Lisa Growette Bostaph,
and William King
January 2025

This report is part of a larger project, the ISP Sexual Assault Kit Initiative (SAKI), funded by the Bureau of Justice Assistance (#15PBJA-22-GG-03846-SAKI), and in partnership with the Idaho State Police Forensic Services (ISPFSS). We wish to thank ISP Colonel Bill Gardiner, ISPFSS Director Matthew Gamette, and members of the SAKI team for their assistance. For information about this report, contact Dr. William King (billking@boisestate.edu) or Dr. Lisa Growette Bostaph (lisabostaph@boisestate.edu).

Introduction

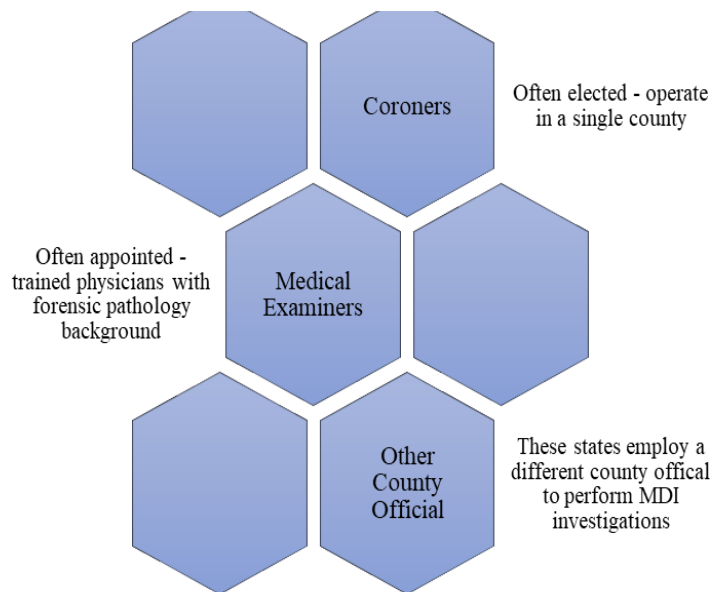

With the importance of coroner and medical examiner systems in the United States, it is imperative to understand their rules and regulations for operation. Medicolegal death investigations are performed for deaths in the jurisdiction of a coroner or medical examiner and collect information regarding the deceased individual and scene in order to identify whether further investigation into the death is necessary (American Board of Medicolegal Death Investigator, n.d.). They are instrumental in the investigation and determination of cause and manner of death. Though their primary focus is often in cases of unexplained or unnatural deaths, they play a role in determining all cases of death (Institute of Medicine, 2003). This report seeks to understand the variation and complexity of these positions across the United States through analysis of statutes and policies pertaining to the procedures and operations of medicolegal death investigation (MDI) systems.

Types of MDI Systems and Variability

In examining the findings of the Collaborating Office for Medical Examiners and Coroners (COMEC), there are three recognized types of MDI systems present in the United States, presented in Figure 1. Coroners are most often elected, operate within a single county, and are not usually required to possess medical training or be a certified physician (Institute of Medicine, 2003). Medical examiners, on the other hand, are often appointed officials, trained physicians, and commonly also recognized as forensic pathologists. Depending on the location, they can serve their role in a county, region, or state level capacity (COMEC, 2024). The final category recognized is other county official systems. Not including a coroner or medical examiner, these systems employ a different county official who performs MDI investigations. Their suggestions for common positions in these systems are “Justices of the Peace, county attorneys, sheriff-coroners and other law enforcement personnel” (COMEC, 2024, p. 1).

Lack of standardization of MDI systems is the result of multiple factors. An office's organizational placement is a large defining factor. Many states have standalone offices, while some house them within established law enforcement offices. There are also states that establish these offices as part of a forensic laboratory or in their health department. As of 2003, approximately 43% of the nation's population existed in an area covered by standalone

Figure 1. Types of MDI Systems in the United States

offices (Institute of Medicine, 2003). Funding for these offices also varies by state, often made up largely of county or state tax dollars. However, low personnel salaries often lead to difficulties in recruiting qualified and well-trained staff (Institute of Medicine, 2003).

The operation of MDI systems can also be standardized across an entire state or vary by county. This is usually correlated with the existence of a state medical examiner, who is often the guiding office for procedures. Findings from March 2024 show that 23 states as well as Washington D.C. have counties primarily served by a medical examiner. Twenty states have counties that are served by county coroners, and six remaining states have MDI systems run by other county officials (COMEC, 2024). As of 2018, there were over 3,000 MDI offices located in the United States. Of the recorded offices (n = 3,143), approximately 49% employed the use of a coroner (n = 1,544), 36% employed a medical examiner (n = 1,146), and 14% employed a system using other county officials (n = 453) (COMEC, 2018). These findings are presented in Figure 2 (COMEC, 2024, p. 2).

Qualifications and Statutes

Many states use both a coroner and medical examiner. In these cases, coroners are often elected or appointed positions, whereas medical examiners are mainly appointed by a governing body to oversee certain tasks and procedures, or in the event of the office of the coroner's abolishment. The intricacies of coroner and medical examiner positions vary by state, but there are identifiable commonalities. Trying to determine the standing of offices is difficult, but many are evaluated on factors such as accreditation through the National Association of Medical Examiners (NAME)

and requirements for training. According to state statutes regarding the term length of coroners and medical examiners, 23 states implement a term length of four years, often coinciding with the regular election cycle (CDC, 2024). Two states, Arkansas and Tennessee, limit their terms to two years (CDC, 2024). The remaining 25 states, either do not designate a term length or the MDI position in their state is appointed, so term length is determined by a governing body rather than through a fixed term. The term limits of the 25 identified states and associated statutes are listed in Appendix A.

The largest theme identified throughout all statutes was qualifications and training, as statutes mention education requirements, medical background, specialized training, as well as the process of continued training. Qualifications vary depending on the state, but there are commonly recognized and frequently repeated requirements. Almost two-thirds, 62% (n = 31), require a minimum of forensic pathology training often with certification by the American Board of Pathology. Many of these states coincide with those that primarily use medical examiners. A number of other qualifications are identified, most commonly being a resident of the county, a U.S citizen, and holding a high school diploma or equivalent. An interesting area of variation is within the required amount of ongoing training required for individuals in MDI positions. Not all statutes require ongoing education, and those that do range from needing to complete a program once to ongoing training on an annual basis with consequences if it is not completed (CDC, n.d.). This variation suggests that there are substantial differences in education across the country, not only in the content but in the required length. The other most frequent areas identified were distinctions between medical examiner and coroner roles, state residency requirements, age and citizenship requirement, and the mention of forensic pathology experience. The five most frequent themes are identified in Figure 3. A full list of qualifications is listed by state and statute in Appendix B.

Figure 3. Five Most Common Qualification Themes from Statutes

Conclusion

Medicolegal Death Investigation (MDI) Systems play a crucial role in how deaths are processed in the United States. They may be run by varying personnel according to a state's needs, and operational differences present themselves in their placement and funding. Both are determined by a multitude of factors that can impact the day-to-day functions of these offices. Perhaps the

largest area of variation is within qualifications, with each state mandating their own requirements for the positions of coroner and medical examiner. While commonalities, such as education and residency, appear in many of the statutes, the lack of standardization leaves the broader network of MDIs to be inconsistent and difficult to widely analyze. In conclusion, understanding the disparities present in MDI systems is important to bettering the processes through which death investigations are performed as well as the organizational systems that support them.

Appendix B

Table 2. Statutory Qualifications for Coroners by State, as of 2024

State	Qualifications	Statute
Alabama	<p>“Complete at least 12 hours of approved training within six months of assuming office, unless he or she has at least 24 months of previous service as a county coroner or deputy coroner in the state. Any coroner, deputy coroner, or any person authorized to officially represent the county coroner shall complete 12 hours of training, approved by the commission, during each calendar year he or she serves as coroner. (1) Is a US Citizen (2) is a resident in the county they seek election for at least a year (3) registered voter (4) is 25 yrs old prior to election date (5) has a high school diploma (6) no felony convictions (7) completed next scheduled training no longer than 180 days after election or appointment”</p>	<u>Ala. Code § 11-5-31.</u>
Alaska	<p>“(b) The state medical examiner and the deputy medical examiner must be physicians licensed to practice in the state who have education and experience in forensic pathology”</p>	<u>Alaska Stat. Ann. § 12.65.015.</u>
Arizona	<p>“Forensic pathologist”</p>	<u>Ariz. Rev. Stat. Ann. § 11-592.</u>
Arkansas	<p>“(a)(1) The State Medical Examiner as well as associate medical examiners shall</p> <p style="padding-left: 40px;">(A) Be citizens of the United States;</p> <p style="padding-left: 40px;">(B) Be physicians or surgeons with a doctor of medicine degree who have been licensed or who are eligible to be licensed to practice medicine in the State of Arkansas;</p> <p style="padding-left: 40px;">(C) Have a minimum of three (3) years postgraduate training in human pathology as recognized by the American Medical Association; and</p> <p style="padding-left: 40px;">(D) Have had at least one (1) year of experience in medical-legal practice.</p> <p>(2) The State Medical Examiner shall also be board certified or eligible for board certification as recognized by the American Board of Pathology in Forensic Pathology.”</p>	<u>Ark. Code Ann. § 12-12-307.</u>
California	<p>“The medical examiner shall be a licensed physician and surgeon duly qualified as a specialist in pathology”</p>	<u>Cal. Gov't Code § 24010</u>
Colorado	<ul style="list-style-type: none"> -Is a citizen of the United States and a resident of the state of Colorado and of the county in which the person will hold the office of coroner; -Has earned a high school diploma or its equivalent or a college degree -Attends at the first opportunity after the election or appointment, a training course for new coroners of at least forty hours -Obtain certification in basic medical-legal death investigation 	<u>Colo. Rev. Stat. Ann. § 30-10-601.5.</u>

	-Complete a minimum of sixteen hours of in- service training	
Connecticut	“The Chief Medical Examiner shall be a citizen of the United States and a doctor of medicine licensed to practice medicine in Connecticut and shall have had a minimum of four years postgraduate training in pathology and such additional subsequent experience in forensic pathology as the commission may determine, provided any person otherwise qualified who is not licensed to so practice may be appointed Chief Medical Examiner, provided he or she obtains such a license within one year of his or her appointment. The chief medical examiner shall meet all qualifications specified in Section 19a-404 of the Connecticut General Statutes and shall be certified by the American Board of Pathology in forensic pathology.”	Conn. Gen. Stat. Ann. § 19a-404.
Delaware	"Chief Medical Examiner (unspecified). Qualifications of Medical Examiner”	§ 4704
Florida	“Practicing physicians in pathology.”	Fla. Stat. Ann. § 406.06.
Georgia	Qualifications of Coroners and Medical Examiners in Georgia	Ga. Code Ann. § 45-16-80 Ga. Code Ann. § 45-16-1. Ga. Code Ann. § 45-16-6. Ga. Code Ann. § 112-2-.04.
Hawaii	“An autopsy of a deceased person under this chapter shall be performed by an anatomic or forensic pathologist certified as such by the American Board of Pathology. The medical examiner or any of the medical examiner's assistants in the city and county of Honolulu, and any experienced or qualified government physician designated by the coroner in the counties of Hawaii, Maui, and Kauai, shall be the coroner's physician for such county or city and county.”	Haw. Rev. Stat. § 841-14.5. Haw. Rev. Stat. § 841-18.
Idaho	“After January 1, 2010, each county coroner shall complete twenty-four (24) hours of continuing education on a biennial calendar basis. No person shall be elected to the office of coroner unless he has attained the age of twenty-one (21) years at the time of his election, is a citizen of the United States and shall have resided within the county one (1) year next preceding his election . . . All newly elected or appointed county coroners shall attend a coroner's school within one (1) year of taking office. Such school shall be sponsored or endorsed by the Idaho state association of county coroners.”	Idaho Code Ann. § 31-2810 Idaho Code Ann. § 34-622.
Illinois	Qualifications of Coroner and Medical Examiners in Illinois	55 Il. Comp. Stat. Ann. § 5/3-3014. Ill. Admin. Code tit. 20, § 1760.201. 55 Il. Comp. Stat. Ann. § 5/3-3001.
Indiana	-A county coroner must reside within the county as provided in Article 6, Section 6 of the Constitution of the State of Indiana. -The requirement for the minimum basic training course necessary to satisfy the	Ind.
