Blood Toxicology

Qualitative Liquid-Liquid Extraction Methods for GC/MSD Confirmation
 3.6.7 Liquid-Liquid Extraction Procedure for the Recovery of pKa ≥9 Drug Compounds.

3.6.7.1 BACKGROUND

This method is a general blood extraction procedure for a variety of commonly encountered basic drugs that exhibit a pKa of $\cong \geq 9$ along with their metabolites. This method prepares an extract for confirmatory analysis with a gas chromatograph equipped with a mass selective detector (GC\MSD). With the addition of appropriate internal standard(s), this same extraction method may be used for quantitative analysis. Refer to analytical method 3.9.2 for requirements.

3.6.7.2 PRINCIPLE

The method is based upon the principle of liquid/liquid extraction. The sample pH is adjusted with a pH 12 saturated borate buffer and extracted with n-butyl chloride. Pollowing an optional back extraction, the extract is evaporated and reconstituted with methanol. Two internal standards are used to monitor extraction efficiency and chromatographic performance. Gas chromatography in conjunction with full scan mass spectrometry is used to confirm the presence of analytes of interest.

3.6.7.3 **EQUIPMENT AND SUPPLIES**

3.6.7.3.1	Drybath (Fisher or equivalent)
3.6.7.3.2	Evaporative concentrator (Zymark TurboVap or equivalent)
	equipped with nitrogen tank.
3.6.7.3.3	16 x 100mm round bottom glass screw-top tubes
3.6.7.3.4	Screw Cap for 16mm O.D. tubes
3.6.7.3.5	GC/MS Automated Liquid Sampler (ALS) vials
3.6.7.3.6	GC/MS vial microinsert
3.6.7.3.7	pH paper
3.6.7.3.8	Gas chromatograph equipped with a mass selective detector
	(HP 6890/5973 or equivalent) and a nonpolar capillary
	column with a phase composition capable of efficiently
	separating amines, alkaloids, drugs compounds and other
	analytes encountered in toxicological specimens (e.g. 100%-

dimethylpolysiloxane or 95%-dimethyl-polysiloxane with 5% diphenyl)

3.6.7.4 REAGENTS

Refer to Manual section 5.12 for solution preparation instructions.

- Methanol (Certified ACS Grade) 3.6.7.4.1
- n-Butyl chloride (Certified ACS Grade) 3.6.7.4.2
- pH 12 Borate Buffer 3.6.7.4.3
- 100mM HCl 3.6.7.4.4
- 1% HCl in Methanol 3.6.7.4.5

QUALITY ASSURANCE MATERIAL 3.6.7.5

3.6.7.5.1 Positive Control

Positive Control can be prepared with the working solution described below and/or obtained commercially.

described be	iow and/or obtained commerci	any.

Working Internal Standard Solution 3.6.7.5.2.2 $[10 \text{ng}/\mu\text{L}]$

Add 100µL Benzphetamine and Papaverine stock solutions to 10mL volumetric ball flask. OS with methanol.

rsic services Solution is stable for three months when stored at room temperature.

3.6.7.5.3 Negative Control **Negative Whole Blood**

3.6.7.6 **PROCEDURE**

3.6.7.6.1 Initial set-up

For each control and case sample, label two sets of extraction tubes and an ALS vial with microinserts,

3.6.7.6.2 Sample Preparation

3.6.7.6.2.1 Property of Idahoontrol Prepare two positive control samples by adding 200 L mixed working control solution to 2mL hegative whole blood (Utak 44600-WB (F) or equivalent) or pipette two samples commercially obtained whole blood positive control.

When the optional back extraction is used, prepare 2 additional positive controls to parallel the back extraction process.

- Transfer 2mL casework and negative control samples to screw top extraction tube.
- Add 20µL of internal standard mixture. 3.6.7.6.2.4 Vortex.
- Allow sample to stand 10 minutes. 3.6.7.6.2.5
- 3.6.7.6.2.6 Add 2mL borate buffer (pH 12). Vortex.

3.6.7.6.3 Extraction

3.6.7.6.3.1 Pipet 4mL n-butyl chloride into each tube, cap.

Page 3 of 7

	3.6.7.6.3.2	Place tube on rocker for a minimum of 10 minutes.
	3.6.7.6.3.3	Centrifuge 10 minutes at 3200 - 3400 rpm.
	3.6.7.6.3.4	Transfer the n-butyl chloride layer to second tube.
	3.6.7.6.3.5	Add 50μL 1% HCl in Methanol.
	3.6.7.6.3.6	Evaporate to dryness under a gentle stream of nitrogen at approximately 37°C.
3.6.7.6.4	Optional Sam	ple Clean-up
	3.6.7.6.4.1	Reconstitute with 50ul of 100mM HCl.
	3.6.7.6.4.2	Add 1ml of n-Butyl Chloride. Vortex.
	3.6.7.6.4.3	Rock for 5 minutes.
	3.6.7.6.4.4	Centrifuge for 5 minutes at 3200-3400 rpm.
	3.6.7.6.45	Diseard upper n-Butyl Chloride layer.
	3.6.7.6.4.6	Add 2ml of pH 12 borate solution. Vortex
,18	3.6.7.6.4.7	Add 4 ml of n-Butyl Chloride.
petty of lo	3.6.7.6.4.8	Rock for 5 minutes.
pelti	3.6.7.6.4.9	Centrifuge for 5 minutes at 3200 - 3400 rpm.
`	3.6.7.6.4.10	Transfer upper n-Butyl Chloride layer into screw-top tube.
	3.6.7.6.4.11	Evaporate to dryness under a gentle stream of nitrogen at approximately 37°C.
