<sup>2</sup> Basic/Neutral and Acidic/Neutral Drugs and Drug Compounds, Benzodiazepines and Ancillary Compounds, 11-nor-9-THC-D9-COOH (Carboxy-THC), and Gamma-hydroxybutyrate (GHB).

<sup>3</sup> Blood, vitreous humor, and urine.

<sup>4</sup> Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of  $k = 2$ . The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

## Accredited Laboratory

A2LA has accredited

### IDAHO STATE POLICE FORENSIC SERVICES – POCATELLO LABORATORY

*Pocatello, ID*

for technical competence in the field of

### Forensic Testing and Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets the requirements of A2LA R221 - *Specific Requirements: Forensic Examination Accreditation Program – Testing and Calibration*. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 11<sup>th</sup> day of August 2021.
